SECTION III - V Zone Certification Statement

[ NOTE: This section must be completed by a registered engineer or architect. ]

I certify that based upon development and/or review of structural design, specifications, and plans for construction including consideration of the hydrostatic, hydrodynamic and impact londing involved, that the design and methods of construction are in accordance with accepted standards of practice for meeting the following provisions:

The bottom of the lowest horizontal accustural member of the lowest floor (excluding the pilings or columns) is elevated to or above the base flood elevation;

The pile or column foundation and structure attached thereto is anchored to resist flotation, collapse and lateral povement due to the effects of wind and water loads acting simultaneously on all building components.

#### SECTION IV - Breakaway Wall Certification Statement

[ NOTE: This section must be completed by a registered anginecr or architect when breakaway walls are used which exceed & design mafe loading remintance of 20 pounds per square foot. ]

I certify that based-upon development and/or review of atructural design, specifications, and plans for construction that the design and methods of construction of the breakaway valls are in accordance with accopted standards of practice for meeting the following provisions:

Breakaway collapse shall result from a water load less than that which

uould occur during the base flood; The elevated portion of the building and supporting foundation system shall not be subject to collapse, displacement, or other structural damage due to the effects of wind and water loads acting simultaneously

on all building components:

The space below the lowest floor is useable solely for parking of vehicles, building access and storage.
